MARLEO

AI systems. Built to operate.

Designed for your next stage.

Marleo connects AI, custom software and existing tools into practical business workflows. We build the digital foundation around them: managed IT, cloud, security, websites and commerce.

CORE CAPABILITIES

AI systems & automation

Document processing, knowledge access, assisted customer support and connected operational workflows.

Custom software & integrations

Internal tools, customer portals and integrations shaped around existing business systems.

IT & digital platforms

Managed IT, cloud and security, alongside websites, online stores, games and brand identity.

Start with one process. Build a system you can evaluate.

From scope to operation.

01 **Discovery**

Map the workflow, data, integrations and responsibilities. Agree a scope and budget.

02 **Pilot**

Build one application and evaluate it against representative examples and acceptance criteria.

03 **Implementation**

Complete access controls, error handling, documentation and a phased handover.

04 **Operation**

Agree monitoring, support, usage costs and future improvements.

SELECTED DELIVERED WORK

TrustTap

Brand and online store, with custom CRM tooling for customers, orders and NFC configuration.

Pain du Mie

Website with online table reservations and a management dashboard.

These are web and software references. No AI performance results are claimed.

PROJECT PRINCIPLES

Define permissions and approval points before connecting systems. Agree data processing, hosting and third-party providers. Set ownership, documentation and support responsibilities in writing.
